Pulmonary Arterial Thrombectomy Case Example

Clinical presentation:
- Middle-aged female with shortness of breath who “passed out” at home
- In ER, requiring oxygen with normal blood pressure but elevated heart rate
- CT scan with large central clot burden
- Lab studies demonstrated strain on the right heart
- Pulmonary Embolism Response Team Conference Decision: Pulmonary Arterial Thrombectomy with Inari FlowTriever

Pre-procedure CT Scan

*Excellent results with Inari FlowTriever*
*Pulmonary artery pressure normalized and flow restored to normal*
*Patient no longer required oxygen*
*Discharged within 48 hours without complication*
