

Trauma ICD-10 Training Plan

The ICD-10 training plan consists of two parts: self-learning modules and interactive training.

Part 1: Self-Learning Modules

A. ICD-10 Specialty Training for Trauma General Surgeons – Presented by Teri Romano, RN, MBA, CPC, CMDP, Karen Zupko & Associates

Selecting an accurate diagnosis code for injuries may prove to be one of the most difficult and denial-prone areas of the entire ICD-10 code set. Why? Because the format of the injury section has been completely overhauled (now sequenced by anatomic area instead of type of injury) and every injury code now requires a “7th character, a concept that can be confusing and subjective. Trauma surgeons will find the majority of their diagnosis codes in this newly revised section. And as those same patients move on to the ICU, accurate diagnosis codes will be essential to justify critical care coding and billing.

This [webinar](#) covers:

- Navigating the injury section from minor contusions to major abdominal and chest injuries. What clinical documentation is needed to select the most accurate and specific diagnosis code?
- Applying the 7th character: A, D and S for non-fractures and A, B, D, G, K, S for fractures. What do these letters mean and how do they apply in trauma?
- Coding multiple injuries: Is sequencing important? Should all injuries be listed if other specialties (e.g., orthopedics, neurosurgery, plastics) are responsible for managing the other injuries?
- Diagnosis codes and critical care: What diagnosis codes justify the medical necessity of critical care codes?
- Coding for complications: Where are these codes located and what documentation is needed?

View the webinar at: <http://www.iplayerhd.com/player/ICD10TraumaDisorders>

- Total running time is 91 minutes
- [Click here](#) to download the webinar slides to annotate while you watch

B. Complete “ICD-10: Critical Care Medicine” on HealthStream

Log into [HealthStream](#) and click on the “Catalog” tab. Search for “ICD-10: Critical Care Medicine.” Complete the course.

Description: These courses provide important information for physicians on the ICD-10 coding system that will go into effect Oct. 1, 2015. Specialty-specific information is provided on the physician documentation requirements to support code assignment for diagnoses that have the most significant changes. The course also reviews coding system benefits.

Learning Objectives: Physicians will be able to identify the impact of the ICD-10 coding system to their own practice. They will be able to identify diagnoses that have the most

significant changes along with the documentation requirements to support code assignment for those conditions.

C. Documentation Guidance for Patients Admitted to Acute Hospital Setting

Review the 3M Specialty Documentation Reference Cards for “Critical Care” and “Trauma,” located on Inova’s “Physician Documentation” site at the link below. **Note:**

Part 2: Interactive Training (Must view webinar above before interactive session)

Join your colleagues for the following one-hour presentation to complete your training:

“ICD-10 Training for Trauma General Surgery”

Web Conference

Presented by Teri Romano, RN, MBA, CPC, CMDP - Karen Zupko & Associates

September 22 from 9 a.m. – 10 a.m.

R.S.V.P. to Mark Devine by Sept. 18 to receive login instructions

mark.devine@inova.org

Presentation Details:

- Brief summary of the major ICD-10 changes for Trauma General Surgery
- Physician question and answer session
